AUTRIS SOLAR POWERED BITCOIN MINING

FOR IMMEDIATE RELEASE:
December 30, 2024, Panama City, Republic of Panama.

Panama City, Republic of Panama - Autris (OTC: AUTR), ("Autris" or "the Company"), a pioneering company dedicated to promoting freedom and self-sustainability, through the acquisition, design, development, and construction of self-sustainable communities throughout Latin America and the Caribbean, is pleased to provide an update on our long existing digital asset policy, operations, history, and balances.

Through the acquisition of EcoVillages Design and Veritas Village Holdings Panama, Autris has positioned itself as the de facto leader in F.I.R.S.T. Philosophy (Freedom, Independence, Resiliency, Self-Sustainability and Transparency) intentional, residential community development throughout the Latin American region.

Hot on the heels of the recent news regarding Autris' Digital Asset Strategy, proving the company's commitment to bitcoin, Autris announces the successful installation of their new bitcoin mining machine powered 100% by an onsite solar energy system. The leadership of Autris believes that a currency that is not controlled by any government is part of living a freedom-oriented lifestyle and operating a freedom-oriented business. The company has adopted and used bitcoin since its founding for receiving and making payments as well as its treasury balances.

To add to that commitment, and to continue to find ways to make the residents of Autris' Veritas Villages live as close to a financially free life as possible, the company has installed a bitcoin miner in its Veritas Village – Coronado Welcome Center. Running completely on solar energy in this fully off grid luxury community, the miner is a proof of concept for CEO Patrick Hiebert's vision of a financial freedom lifestyle for the residents of Veritas Villages.

"Living in one of our Veritas Villages makes your cost of living nearly zero. With onsite free natural mountain spring fed water, community orchards and gardens and livestock stables for food, and solar systems that power our luxurious homes one hundred percent, you have all the basics covered and nearly no expenses." says Hiebert about life in their freedom and sustainability-oriented communities. "But there were still two small costs we wanted to deal with and those

are HOA fees and property tax. Our goal is to use the excess solar power that each home in our communities have to mine bitcoin to offset these remaining costs. Based on the earnings we have seen so far with our test system, we think it's definitely possible to get to a zero cost of living!"

Hiebert goes on to explain the benefit of using solar power to mine bitcoin. "The largest expense for most Bitcoin miners is the cost of electricity. Well, we don't have that cost, our power is free from the sun. So, every Sat earned is all gravy!" With the Autris solar systems the only cost is the upfront purchase of the system, generally a simple expansion to the existing Veritas Village home's system, and the cost of the bitcoin miner itself. For this test system Autris chose the latest Antminer and found it to be performing very well.

Not only can Veritas Village homes be purchased with bitcoin but all businesses in the communities must accept bitcoin in addition to any other currencies they wish to accept for payment of goods and services. And now with the ability to mine bitcoin using excess solar energy, Autris communities are leading the way in fully integrating bitcoin to create as financially free a life as possible for their residents.
